PROFILE

AI & Machine Learning Engineering graduate with hands-on experience in Generative AI, Machine Learning, Computer Vision, and automation workflows. Skilled in Python and building AI-based solutions through academic and personal projects. Quick learner with strong interest in applying AI to real-world problems and collaborating in team environments.

EDUCATION

B.E. in Artificial Intelligence and Machine Learning Acharya Institute of Technology	09/2021 – 05/2025 Bangalore, India
Pre-University - PCMC St. Claret PU College	06/2019 – 06/2021 Bangalore, India

INTERNSHIP EXPERIENCE

GenAI Intern Brillio Technologies Pvt. Ltd.	11/2024 – 12/2025 Bangalore, India
---	---------------------------------------

AI Chatbot Testing & Automation

- Performed functional testing and quality evaluation of enterprise AI chatbots by designing structured test prompts and evaluation scenarios.
- Identified hallucinations, logical inconsistencies, and response gaps to improve chatbot reliability.
- Built and documented prompt improvement strategies and guardrail recommendations to enhance response accuracy and safety.
- Developed an Angular-based frontend and TypeScript backend document interface integrating PDF scrolling with chatbot context injection for real-time contextual responses.
- Designed an automation pipeline using AI Agents and n8n to convert meeting transcripts into structured Business Requirement Documents (BRDs).
- Implemented transcript processing workflows including summarization, action-item extraction, and stakeholder mapping.
- Prototyped a Microsoft Teams transcript bot with secure storage integration using Azure Blob Storage.
- Contributed to policy documentation, data cleaning, and AI governance documentation for production-ready deployment.
- Explored deployment strategies including Azure App Service, bot endpoints, storage schemas, and audit trail implementation.

Tech Stack

Python, Generative AI, Prompt Engineering, AI Agents, n8n, Angular, TypeScript, Azure Blob Storage, Chatbot Evaluation, Automation Pipelines

PROJECTS

Autism Detection Using Machine Learning

- Developed a machine learning model to detect autism using structured healthcare datasets.
- Performed data preprocessing including missing value handling, feature scaling, and class balancing techniques.
- Trained and compared models including Support Vector Machine (SVM), Logistic Regression, and XGBoost to identify the best performing approach.
- Evaluated model performance using accuracy, precision, recall, and F1-score.

Hand Gesture Control System

- Developed a real-time hand gesture recognition system using Python and computer vision techniques.
- Implemented hand tracking and gesture detection pipelines using OpenCV to enable gesture-based control of system functions.

Course Recommendation System

- Developed a machine learning-based recommendation system to provide personalized course suggestions.
- Implemented content-based filtering using TF-IDF to analyze course descriptions and generate relevant recommendations.
- Built and deployed the application using Python and Flask to deliver real-time recommendations through a web interface.

SKILLS

Languages

- Python, SQL, TypeScript and JavaScript

Frameworks & Tools

- Scikit-learn, OpenCV, Flask, FastAPI, Pandas, NumPy, n8n, Git

AI/ML

- Machine Learning, Generative AI, Prompt Engineering, Data-preprocessing, Model evaluation

Cloud Platform

- Azure, AWS

CERTIFICATES

Python for Data Science, AI & Development
IBM

Foundations of Data Science
Google
